

AMANPREET KAUR

Senior Android Developer | Mobile Application Engineer

+91 9041170046 • kauramanp1808@gmail.com • Jalandhar, Punjab, India • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Android Developer with 8+ years of experience shipping scalable, high-performance consumer mobile applications using Kotlin and Java. Proven track record of delivering greenfield products end-to-end — from architecture decisions to Play Store release. Deep expertise in modern Android stacks (Jetpack Compose, MVVM/Clean Architecture, Coroutines, Hilt) and hands-on experience integrating real-time data, IoT/BLE hardware, payments, and Firebase services. Comfortable ramping fast in unfamiliar territory — extended skills to Flutter/Dart and iOS patterns. Active community mentor, GDG Jalandhar organiser, and Technovation Women Techmakers Ambassador.

TECHNICAL SKILLS

Languages	Kotlin, Java, Dart (Flutter)
Android	Android SDK, Jetpack Compose, Jetpack Components (ViewModel, LiveData, Navigation, Room), Material Design 3, XML Layouts
Architecture	MVVM, Clean Architecture, Multi-Module Architecture, Repository Pattern
Async	Kotlin Coroutines, Flow, RxJava
Networking	Retrofit, OkHttp, REST APIs, GraphQL, JSON/Gson/Moshi
DI	Hilt, Dagger2
Database	Room, SQLite, DataStore, SharedPreferences, Secure Storage
Firebase	FCM Push Notifications, Analytics, Crashlytics, Auth, Realtime Database, Cloud Storage
BLE / IoT	Bluetooth Low Energy, GATT Services & Characteristics, Device Pairing/Bonding, Real-time Device Communication
Background	WorkManager, Services, Broadcast Receivers
Testing	JUnit, MockK, Espresso, Compose UI Testing
CI/CD & Tools	Git, GitHub Actions, Play Console, Android Studio, Agile/Scrum
Other	Deep Linking, In-App Purchases, Push Notifications, Performance & Memory Optimization, Battery Optimization, Socket Programming, Accessibility

PROFESSIONAL EXPERIENCE

Android Developer | *Intellisense Technology* (Aug 2024 – Feb 2026)

- Owned end-to-end development of SafeGuard360, a smart city safety platform connecting citizens, municipal operators, and IoT infrastructure — built emergency alerting, live incident mapping, patrol management, fleet tracking, and camera feed integration into a single modular Android app.
- Implemented Bluetooth Low Energy (BLE) and IoT device integration (cameras, sensors, smart lighting) using GATT services, device discovery, pairing/bonding, and bidirectional real-time data synchronisation across diverse Android device models.
- Sole developer of TOPSY, a full ride-booking platform — built both the driver and customer Android apps independently; customer app handles ride discovery, real-time driver tracking, and in-app payments; driver app handles live ride matching, GPS navigation, trip management, and digital wallet payouts.
- Reduced production crashes and ANRs through proactive monitoring via Firebase Crashlytics and Play Console; coordinated incident triage and hotfix deployments with cross-functional teams, improving post-release stability.
- Maintained 80%+ unit test coverage on critical flows using JUnit and MockK; implemented Compose UI tests to safeguard key user journeys.

- Led release validation and rollback strategies for high-stakes production deployments, ensuring zero-downtime releases.

Mobile Application Developer | *O7 Solutions* (Aug 2020 – Jul 2024)

- Delivered multiple high-traffic e-commerce and fintech Android applications serving millions of users, handling secure payments, wallet/recharge workflows, and real-time order tracking.
- Integrated mobile apps with enterprise backend systems via API gateways (APIM), implementing OAuth 2.0 authentication, encrypted local storage, and RESTful API layers with Retrofit and OkHttp.
- Drove a full codebase migration from legacy Java to Kotlin/Coroutines/Flow, reducing async complexity and improving performance; maintained backward compatibility across Android OS 6.0–14.
- Coordinated release strategy across mobile, backend, QA, and product teams for major product initiatives, consistently hitting milestone dates in Agile/Scrum sprints.
- Implemented Firebase Analytics and event tracking pipelines, providing product teams with actionable behavioural data to drive roadmap decisions.

Android Developer | *Beebo IT Solutions Pvt. Ltd* (May 2019 – Jul 2020)

- Solely designed and shipped a complete taxi booking platform — built both the driver and customer Android apps from scratch as the only developer on the project.
- Customer app: ride discovery, real-time driver tracking, booking and scheduling flows, in-app payments. Driver app: live ride matching, GPS navigation, earnings dashboard, and trip history. Built with Kotlin + MVVM, socket-based real-time communication, Firebase push notifications, and Google Maps SDK.

Android Developer | *Corevein Technology* (Nov 2017 – Apr 2019)

- Developed Android applications interfacing with electronic devices and embedded systems via Bluetooth Classic and BLE, building foundational expertise in hardware–software communication that became a career specialisation.

SELECTED PROJECTS

SafeGuard360 — IoT Home Monitoring App ▶ [View on Play Store](#)

- Smart city safety platform connecting citizens, municipal operators, and IoT infrastructure into a single Android app. Built real-time emergency alert system with geolocation, live interactive incident map, BLE/IoT device integration (cameras, sensors, smart lighting), and role-based dashboards for citizens, patrol teams, and city administrators. Architected modular features including SecureDrive (fleet tracking), GuardSense (patrol management), SafeVision (camera feeds), and SafeCommunity (neighbourhood watch). Sole Android owner from greenfield to Play Store release.

TOPSY - Taxi and Food Booking Platform (Driver + Customer Apps) *Intellisense Technology*

▶ [View on Play Store](#)

- Sole developer of both the driver and customer Android apps for a live ride-booking platform. Customer app: ride discovery, real-time driver tracking, booking flows, and in-app payments. Driver app: live ride matching, GPS navigation, trip management, and digital wallet payouts. Built with Kotlin + MVVM, socket-based real-time communication, Firebase push notifications, and Google Maps SDK. Both apps independently shipped to the Play Store.

COMMUNITY & LEADERSHIP

- Google Developer Groups (GDG) Jalandhar — Organiser & Event Lead
- Women Techmakers Ambassador (Technovation), since July 2023
- Speaker — Flutter/Dart at Google I/O Extended Jalandhar 2023
- Hackathon Mentor — Jalandhar, Chandigarh, Ghaziabad

EDUCATION

Master of Computer Applications (MCA) 2017

Punjab Technical University, Kapurthala

Bachelor of Computer Applications (BCA) 2014

Guru Nanak Dev University, Amritsar
